HEMATOLOGY (HEM)

HEM 0100 - Hematology
Credit(s): 2-10 Credits (Repeatable for credit)
The primary goal of Hematology is to help you understand the clinical and pathophysiologic principles of benign and malignant hematologic disease. We will focus primarily on thrombosis and hemostasis, disorders of red blood cells, and malignant hematology. We will also cover the principles of transfusion medicine and relevant microbial pathogens. In addition to preparation for third year, we believe that the course will be invaluable in your participation for the Step 1 examination.
