MAGNETIC RESONANCE IMAGING (MRI)

MRI 4300 - MRI Clinical Practicum I
Credit(s): 1 Credit
Students will perform a variety of MRI procedures in multiple clinical settings under the direct supervision of qualified medical professionals. Students will interact with patients ranging from infants to geriatrics and apply the skills necessary for patient and personnel safety. The practicum allows students to practice skills necessary to obtain high quality MR images, to alter protocols objectively based on patient anatomy and pathology or physical condition, and to identify image quality and equipment problems to make appropriate corrections. Clinical experience will include venipuncture and the administration of contrast media. (Offered every Fall)
Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MRI 4310 - Physical Principles
Credit(s): 3 Credits
This class will cover the history of magnetic resonance imaging, matter, magnetism, signal production, and the physics related to imaging. This includes MR signal induction, sampling and conversion, along with tissue characterization; T1 and T2 relaxation; signal decay; K-space; Fourier transformation; spatial encoding; and image characteristics. (Offered every Fall)
Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MRI 4320 - Cross Sectional Anatomy and Pathology
Credit(s): 3 Credits
Students will become familiar with MRI cross-sectional anatomy and will learn how to view and to image the human body in multiple planes. They will learn specific imaging planes and protocols for specific exams as well as contrast usage and recognition. The pathology of the various body regions (including neurological, visceral, musculoskeletal, soft tissue, and vasculature) will be discussed as it relates to MR imaging. (Offered every Fall)
Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MRI 4330 - Instrumentation and Quality Analysis
Credit(s): 3 Credits
This class covers all components of MR imaging equipment including the main and secondary magnet systems, RF coils, the acquisition console, and all ancillary equipment. The various types of magnets, gradients, and shielding will be covered, as well as maintenance, quality analysis and operational workflows. (Offered every Fall)
Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MRI 4340 - Clinical MRI and Image Production
Credit(s): 5 Credits
Students will learn the clinical aspects of MRI. This includes the basics of image production and the corresponding pulse sequences. Imaging parameters for intrinsic image contrast characteristics, proper sequence selection, adjustment of imaging options, administration and utility of contrast media, and use of post-processing applications are included. (Offered every Fall)
Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MRI 4350 - Patient Care and MRI Safety
Credit(s): 3 Credits
This class will cover the handling, care, and safety of patients, visitors, and staff in the MRI environment. This includes the proper education and screening of anyone or any equipment entering the magnetic and RF fields. Patient assessment, communication and care, as well as ethical and legal principles will be included. Emergency procedures and their effect on patients, staff, and the public will also be discussed. (Offered every Fall)
Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MRI 4400 - MRI Clinical Practicum II
Credit(s): 2 Credits
The course will continue the beginning level for MRI clinical experience. The clinical experience includes fundamental knowledge with integration of skills and critical thinking. Offered in winter.
Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MRI 4410 - Clinical MRI Practicum
Credit(s): 9 Credits
Students will perform a variety of MRI procedures in multiple clinical settings under the direct supervision of qualified medical professionals. Students will interact with patients ranging from infants to geriatrics and apply the skills necessary for patient and personnel safety. The practicum allows students to practice skills necessary to obtain high quality MR images, to alter protocols objectively based on patient anatomy and pathology or physical condition, and to identify image quality and equipment problems to make appropriate corrections. Clinical experience will include venipuncture and the administration of contrast media. (Offered every Spring)
Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MRI 4420 - Advanced and Emerging Technology
Credit(s): 3 Credits
An exploration of the emerging technologies and advances in MRI, including their impact on imaging and healthcare, will be presented. In addition, a correlation between MRI and other imaging modalities (Computed Tomography, Nuclear Medicine/PET, Ultrasound, etc.) will be discussed. This course will include MRI simulation labs and assignments. (Offered every Spring)
Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.
MIRI 4700 - MRI Clinical Practicum III
Credit(s): 10 Credits
The course will continue the beginning level for MRI clinical experience. The clinical experience includes fundamental knowledge with integration of skills and critical thinking. (Offered in Spring)

Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MIRI 4900 - MRI Clinical Practicum IV
Credit(s): 8 Credits
This course is a continuation of MIRI 4700 Clinical MRI Practicum. (Offered in Summer)

Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MIRI 4910 - Clinical Practicum
Credit(s): 0 Credits
This course is a continuation of MIRI 4410. (Offered every Summer)

Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MIRI 4960 - Capstone in MRI
Credit(s): 2 Credits
Students enrolled in this course develop an individual research project for presentation addressing a current or emerging topic in the field of MRI. The project is worked on independently with program faculty mentorship and is required for graduation. (Offered every Spring)

Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.

MIRI 4980 - Independent Study
Credit(s): 1 or 3 Credits (Repeatable for credit)
Restrictions:
Enrollment is limited to students with a major in Magnetic Resonance Imaging.
